-----CIVIL ENGINEERING------

Semester/Y	ear	VI/III			Program	n	B.Tech					
Subject Category	DC	Sul	bject Code: CE-		CE-604 Subject Name:		Hydrol		cWat ineer		source	
			Maximum Mar	rks Allot	tted			Cont	act H	oure		
		Theor	У		Pra	actical	Total	Cont		Juis	Total	
End Sem	Mid-S	Sem	Assignment	Quiz	End Sem	Lab- Work	Marks	L	т	Ρ	Credits	
60	20	0	10	10	-	-	100	3	-	-	3	

Prerequisites:

Fluid mechanics and Engineering Mathematics.

Course Objective:

- 1. Student will understand the Role of the Water resources in Development of human civilization and sustainability.
 - Student will learn the concept, theory and principle related to Hydrological cycle and application of water for irrigation purpose.
 - Student will learn Data Collection techniques related to various parameter like precipitation, Runoff and losses.
- 2. Student will learn Analysis of Data, its interpretation and use for forecasting and related problems.
- 3. Student will learn Design of the Structures for Flood control, Canals, Wells etc

Course Outcomes:

After completion of the course, the student will be able to:

1. Understand the Role of the Water resources in human civilization and its development. Demonstrate concept, theory and principle related to Hydrological cycle and application of water for irrigation purpose.

Understand the data Collection techniques related to various parameter like precipitation, Runoff and losses.

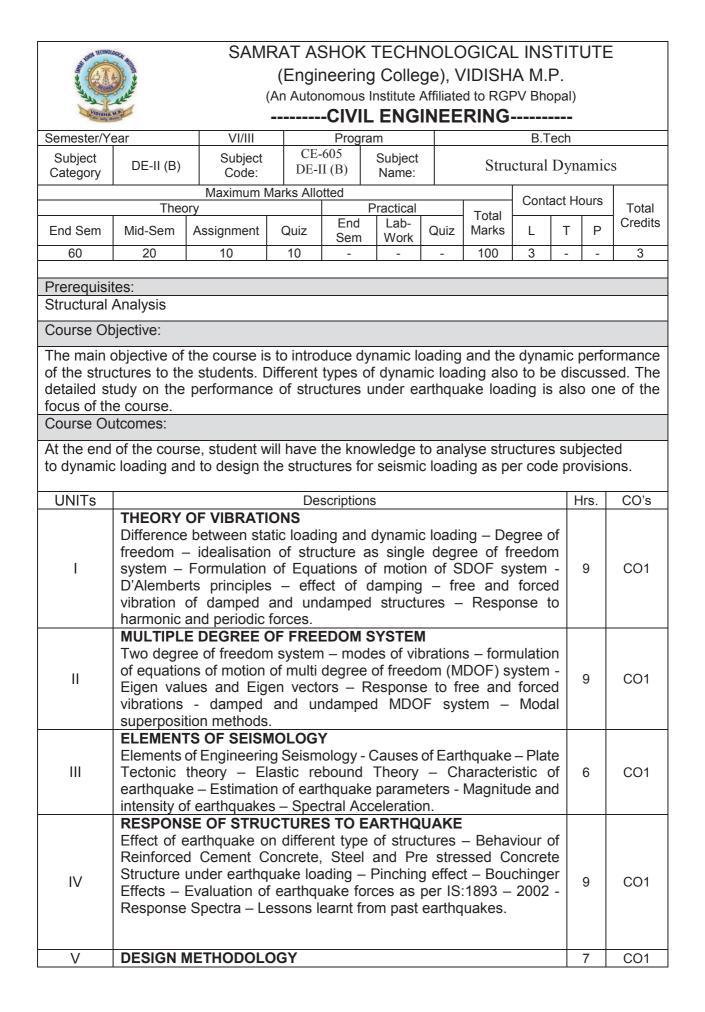

- 2. To acquire aptitude for Analysis of Data, its interpretation and use for forecasting related problems.
- 3. Design the Structures for Flood control, Canals, Wells.etc

UNITs	Descriptions	Hrs.	CO's
I	Hydrology : Hydrological cycle, precipitation and its measurement, recording and non-recording rain gauges, estimating missing rainfall data, rain gauge networks, mean depth of precipitation over a drainage area, mass rainfall curves, intensity-duration curves, depth-area duration curves, Infiltration and infiltration indices, evaporation stream gauging, run off and its estimation, hydrograph analysis, unit hydrograph and its derivation from isolated and complex storms, S-curve hydrograph, synthetic unit hydrograph.	15	CO1/CO2
II	Floods and Ground water : Types of floods and their estimation by different methods, probability and frequency analysis, flood routing through reservoirs and channels, flood control measures, economics of flood control, confined and unconfined aquifers, aquifer properties, hydraulics of wells under steady flow conditions, infiltration galleries. Ground water recharge-necessity and methods of improving ground water storage. Water logging-causes, effects and its prevention. Salt	5	CO1/CO2

	efflorescence-causes and effects. reclama salt affected lands.	ation of water logged and							
111	Water resources planning and management:Planning of water resources projects, data requirements, economic analysis of water resources projects appraisal of multipurpose projects, optimal operation of projects introduction to linear programming and its application to water resources projects. Role of water in the environment, rain water harvesting, impact assessment of water resources development and managerial measures.8CO1/CO2								
IV	Canal irrigation: Types of canals, alignment, design of unlined and lined canals, Kennedy's and Lacey's silt theories, typical canal sections, canal losses, linings-objectives, materials used, economics. Canal falls & cross drainage works, - description and design, head and cross regulators. escapes and outlets, canal transitions.								
V	Well irrigation: Types of wells, well construction, yield tests, specific capacity level and specific yield, hydraulic design of open wells and tube wells, methods of raising well water, characteristics of pumps and their selection, interference of wells, well losses, advantages and disadvantages of well irrigation.5CO1/CO2 CO3
