

# SAMRAT ASHOK TECHNOLOGICAL INSTITUTE

(Engineering College), VIDISHA M.P.

(An Autonomous Institute Affiliated to RGPV Bhopal)

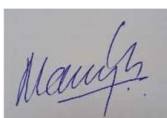

## Department of Applied Science

### Syllabus For EE,CSE, EI, EC, IT, BC, IoT and AIADS Programs

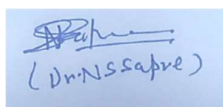

|  |   |                 |           |               |                   |               |      |         |               |
|--|---|-----------------|-----------|---------------|-------------------|---------------|------|---------|---------------|
| Subject Category   | BSC   | Subject Code:   | CHB101    | Subject Name: | Applied Chemistry |               |      |         |               |
| Maximum Marks Allotted   |   |                 |           |               |                   | Contact Hours |      |         | Total Credits |
| Theory   |   |                 | Practical |               | Total Marks       | L             | T    | P       |               |
| End Sem  | Mid-Sem   | Quiz/Assignment | End Sem   | Lab-Work      |                   |               |      |         |               |
| 60   | 20  | 20              | 30        | 20            | 150               | 3             | -    | 2       | 4             |
| <b>Prerequisites:</b>  |   |                 |           |               |                   |               |      |         |               |
| Students who have completed 12th with Science stream or Chemistry of 12th standard or equivalent   |   |                 |           |               |                   |               |      |         |               |
| <b>Course Objective:</b>   |   |                 |           |               |                   |               |      |         |               |
| The main aim of Engineering Chemistry is to make Students familiar with basic concepts of Chemistry, the students face in industry and engineering field. With this background the Students will be able to explain Scientifically the various chemistry related problems in industry/engineering field.                               |   |                 |           |               |                   |               |      |         |               |
| <b>Course Outcomes:</b>  |   |                 |           |               |                   |               |      |         |               |
| Student after successful completion of course shall possess skills to think critically and analyse chemistry problems in engineering field. Students are expected to solve the chemistry problems with an engineering purview. Laboratory work is intended for students to learn conducting experiments and analyse experimental data. |   |                 |           |               |                   |               |      |         |               |
| <b>CO's</b>  | <b>CO's Description</b>   |                 |           |               |                   |               |      |         |               |
| CO1  | Differentiate hard & soft water, solve the related numerical on water treatment and have knowledge regarding its Significance in industry and daily life.   |                 |           |               |                   |               |      |         |               |
| CO2  | Apply their knowledge regarding various types of fuels including petroleum fuels, Fuels Cells, Electrical Vehicle Batteries   |                 |           |               |                   |               |      |         |               |
| CO3  | Acquire basic knowledge of various types of Corrosion, its harmful effects and preventive methods.  |                 |           |               |                   |               |      |         |               |
| CO4  | To know basic concept of polymers and its properties.To have knowledge about advanced electroactive polymers and their applications. To know preliminary understanding of Nanomaterials and their applications.   |                 |           |               |                   |               |      |         |               |
| CO5  | Analyze the need of instruments. Identify and estimate about the unknown/new compounds with the help of spectroscopy/ chromatography.   |                 |           |               |                   |               |      |         |               |
| UNIT   | Descriptions  |                 |           |               |                   | Hrs           | CO's | Remarks |               |
| I  | <b>WATER TECHNOLOGY:</b><br>Sources, Availability, impurities in Water, Types of hardness, Units of hardness. Concentration expression: Normality, Molarity, Molality. Water analysis techniques – Hardness determination by EDTA method, Alkalinity determination. Defects in boiler due to Hard water. External Treatment (Lime-soda, Zeolite & Ion exchange resin method) & Internal Treatment of Boiler feed water. Numerical Problems.   |                 |           |               |                   | 8             | 1    |         |               |
| II   | <b>ELECTROCHEMISTRY &amp; ENERGY STORAGE SYSTEMS:</b><br>Electrochemistry: Introduction, EMF of cell, Single electrode potential-Derivation of Nernst equation, Numerical problems based on Nernst Equation (E, E <sub>o</sub> &E <sub>cell</sub> ). Energy Storage Systems: Introduction, Classification of batteries (primary, secondary and reserved batteries). Construction, working, and applications of Li-ion batteries. Advantages of Li-ion battery as an electrochemical energy system for electric vehicles. Recycling of Lithium-ion batteries by direct cycling Method. Introduction of Na- ion battery, graphene battery. Recycling, disposal and second use of batteries. |                 |           |               |                   | 8             | 2    |         |               |
| III  | <b>CORROSION, METHODS OF PREVENTION OF CORROSION</b><br>Introduction, Types of Corrosion, Disadvantages of corrosion, Theories of corrosion, Factors influencing the rate of corrosion. Methods of Prevention of Corrosion, Control of Environment, Alloying, Surface coatings, Metal coatings, Electroplating, Galvanization and Tinning, Inorganic coating, Anodizing, Cathodic Protection, Sacrificial Anode Method etc  |                 |           |               |                   | 8             | 3    |         |               |

|  |  |    |   |  |
|--|--|----|---|--|
| IV   | <p><b>ENGINEERING MATERIALS:</b><br/> Polymers: Nomenclature &amp; classification of polymers. Electrically active polymers, Conducting polymers, <b>Liquid-crystal polymers (LCP)</b>, Photoactive polymers, Photovoltaic materials: solar cells and dye sensitized solar cells-principle and applications, Conducting Polymers: Methods of synthesis and properties of polyaniline (PANI), polypyrrol (PPy) and polythiophene (PTh); applications of these polymers in advanced technologies.<br/> Nanomaterials: Synthesis, characterization and applications of nano materials (Eg. fullerene, graphene, carbon nanotubes and quantum dots) in electronic and nano devices.<br/> Introduction to Optical Fibres.</p> | 8  | 4 |  |
| V  | <p><b>INSTRUMENTAL METHODS OF ANALYSIS:</b><br/> Importance of Instrumental techniques. Classification of Instrumental techniques. Introduction to Electroanalytical and Spectroscopic Methods. Principle, Instrumentation, Working and applications of following techniques: Colorimetry, IR Spectroscopy, Conductometry, pH metry, Chromatography and Gas Chromatography.</p>  | 8  | 5 |  |
| Guest Lectures (if any)  |  |    |   |  |
| <b>Total Hours</b>   |  | 40 |   |  |
| <b>Suggestive list of experiments:</b>   |  |    |   |  |
| <b>LABORATORY EXPERIMENTS:(Any 10 experiments to be performed)</b>   |  |    |   |  |
| <ol style="list-style-type: none"> <li>To determine strength of unknown Ferrous Ammonium Sulphate <math>\text{FeSO}_4 \cdot (\text{NH}_4)_2\text{SO}_4 \cdot 6\text{H}_2\text{O}</math> (Mohr's Salt) solution by titrating it against intermediate Potassium Dichromate (<math>\text{K}_2\text{Cr}_2\text{O}_7</math>) solution using Di Phenyl Amine(DPA) as internal indicator.[Redox Titration]</li> <li>To determine Temporary, Permanent and Total Hardness in given sample of water by E.D.T.A. method.[Complexometric Titration]</li> <li>To determine strength of Sodium Carbonate and Sodium Bicarbonate in given alkaline solution by titrating with standard HCl using phenolphthalein and Methyl Orange indicators.<br/>Or<br/>To determine alkalinity in given water sample using Phenolphthalein and Methyl Orange indicators.[Acid Base Titration]</li> <li>To determine strength of unknown <math>\text{CuSO}_4</math> solution by titrating it against intermediate sodium thiosulphate (Hypo) solution using starch as final indicator.[Iodometric Titration]</li> <li>To determine the chloride content of the given sample of water using silver nitrate solution with potassium chromate solution as an indicator.[Precipitation Titration]</li> <li>To separate mixture of pigments by Thin Layer Chromatography [Instrumental Methods].</li> <li>To separate mixture of pigments by Paper Chromatography [Instrumental Methods].</li> <li>To verify Beer Lambert's law of colorimetry [Instrumental Methods].</li> <li>To determine amount of Iron by colorimetry [Instrumental Methods].</li> <li>To estimate amount of Iron by UV spectrophotometer.[Instrumental Methods]</li> <li>To determine pH of given solution using pH meter. [Instrumental Methods]</li> <li>To determine strength of acid/base by conductometric titrations. [Instrumental Methods]</li> <li>To determine Moisture content in given sample of coal.[Proximate Analysis]</li> <li>To determine Ash content in given sample of coal.[Proximate Analysis]</li> <li>To determine the Viscosity Index of give lubricating oil by Redwood Viscometer No.1 and Redwood Viscometer 2.[Lubricating Oil Analysis]</li> <li>To determine the Flash Point and Fire Point of lubricating oil by Abel's Apparatus.[Lubricating Oil Analysis]</li> <li>To determine the Flash Point and Fire Point of lubricating oil by Pensky Martin's Apparatus.[Lubricating Oil Analysis]</li> <li>To determine S.E.N. of given lubricating oil[Lubricating Oil Analysis].</li> </ol> |  |    |   |  |

| <b>Course Objective:</b>   |  |               |        |               |  |      |             |                             |             |   |               |
| The objective of this course is to introduce the Computer Science and Engineering and Basic concepts of computers. To understand the component of computer and generation of computer. To familiarize students with the programming and problem-solving concepts using C Programming language. The course will help student to solve the problem using computer programming.   |  |               |        |               |  |      |             |                             |             |   |               |
| <b>Course Outcomes:</b>  |  |               |        |               |  |      |             |                             |             |   |               |
| Upon completion of this course, the student will be able to:   |  |               |        |               |  |      |             |                             |             |   |               |
| <ul style="list-style-type: none"> <li>• CO1: Familiarize the importance of computer science and engineering. Understand the concept of generation of computer and learn about component of computer system.</li> <li>• CO2: Understand the concept of Problem-solving using C and Implement the flowchart and program for solving Mathematical and Engineering problems.</li> <li>• CO3: Articulate the Modular Programming Concept and Solve the Engineering Problem using Modular Programming.</li> <li>• CO4: Articulate the Advance C Programming Concept to Solve the Engineering Problem using Structure, Union and File Management.</li> <li>• CO5: Describe the various Computer Science disciplines and their applications.</li> </ul> |  |               |        |               |  |      |             |                             |             |   |               |
| <b>UNITS</b>   | <b>Descriptions</b>  |               |        |               |  |      |             | <b>Hrs.</b>                 | <b>CO's</b> |   |               |
| I  | <b>Introduction to Computer Science and Engineering:</b> Computer: Definition, Classification, Generation, Organization i.e. CPU, register, Bus architecture, Instruction set, Memory & Storage Systems, I/O Devices, and System & Application Software.   |               |        |               |  |      |             | 6                           | CO1         |   |               |
| II   | <b>Problem Solving using C:</b> Programming solving using computer concept, flowchart.Rules/ conventions of coding, documentation, naming variables, History of C, Structure of a C Program; Data types, Constant & Variable, naming variables, Operators (arithmetic, logical, bitwise, relational, ternary, Pointers - & and * operators) & expressions, Control Constructs – if-else, for, while, do-while, Case switch statement,Special constructs – Break, continue, exit(), goto& labels,Type conversion & type casting, Priority & associativity of operators; Type modifiers. |               |        |               |  |      |             | 10                          | CO2         |   |               |
| III  | <b>Modular Programming:</b> Arrays; storage classes, Functions; Arguments; Return value; Parameter passing – call by value, call by reference; Return statement; Scope, visibility and life-time rules for various types of variables; Calling a function; Recursion – basics, comparison with iteration, types of recursion- direct, indirect, tree and tail recursion, when to avoid recursion.  |               |        |               |  |      |             | 9                           | CO3         |   |               |
| IV   | <b>Advance C Programming:</b> Structure – basic, declaration, membership operator, pointer to structure, referential operator, self-referential structures, structure within structure, array in structure, array of structures. Union – basic, declaration; Pre-processor Directives: C pre-processor – basics, #Include, #define, Enumerated data type; Typedef; File Handling in C- concepts, functions.  |               |        |               |  |      |             | 8                           | CO4         |   |               |
| V  | <b>Introduction to Computer Science disciplines and their applications:</b> Networking, Security, Operating System, Data Science, Machine Learning, Cloud Computing, Block chain, web development.   |               |        |               |  |      |             | 7                           | CO5         |   |               |

| <b>Prerequisites:</b>  |  |               |            |               |                             |             |               |      |   |               |
| Basic of Differentiations, Integrations and Matrices.  |  |               |            |               |                             |             |               |      |   |               |
| <b>Course Objective:</b>   |  |               |            |               |                             |             |               |      |   |               |
| The objective of this course is to familiarize the prospective engineers with techniques in calculus, and linear algebra. It aims to equip the students with standard concepts and tools at an intermediate to advanced level that will serve them well towards tackling more advanced level of mathematics and applications that they would find useful in their disciplines. |  |               |            |               |                             |             |               |      |   |               |
| <b>Course Outcomes:</b>  |  |               |            |               |                             |             |               |      |   |               |
| This course is to develop students abilities to:   |  |               |            |               |                             |             |               |      |   |               |
| 1. Apply Differential Calculus to Notions of Curvature. Apart from some other Applications they will have a Basic Understanding of Taylor's Theorem, Maxima and Minima.  |  |               |            |               |                             |             |               |      |   |               |
| 2. The Fallouts of Partial Differentiation that is Fundamental to Application of Analysis to Engineering Problems.   |  |               |            |               |                             |             |               |      |   |               |
| 3. Finding area and Volume using Double and Triple Integrals.  |  |               |            |               |                             |             |               |      |   |               |
| 4. The Essential Tool of Matrices and Linear Algebra in a Comprehensive Manner. Student will understand Matrices and their Application to Solve System of Linear Simultaneous Equations.   |  |               |            |               |                             |             |               |      |   |               |
| 5. Students will Gain Experience with Problem Solving in Boolean Algebra and Graph Theory.   |  |               |            |               |                             |             |               |      |   |               |
| UNITS  | Descriptions   |               |            |               |                             |             | Hrs.          | CO's |   |               |
| I  | <b>Differential Calculus:</b> Lebnitz Theorem, Expansion of functions by Maclaurins and Taylors theorem (one variable), Maxima & Minima of two variables, Curvature: Radius and Centre of Curvature for Cartesian Coordinates.   |               |            |               |                             |             | 8             | 1    |   |               |
| II   | <b>Partial Differentiation:</b> Partial Derivatives of Higher Order, Homogeneous Functions, Euler's Theorem, Total differentiation, Errors and Approximations.   |               |            |               |                             |             | 8             | 2    |   |               |
| III  | <b>Integral Calculus :</b> Definite Integral as a Limit of the Sum, Application in Summation of Series, Multiple Integrals, Change of order of Integration, Application of Double and Triple Integrals (Area & Volume).  |               |            |               |                             |             | 8             | 3    |   |               |
| IV   | <b>Matrix :</b> Definition, Types & Properties of Matrices, Elementary Transformation, Rank of Matrix, Consistency of Linear System of Equations and their solutions, Eigen Values and Eigen Vectors, Cayley Hamilton Theorem and its Application to find the Inverse. |               |            |               |                             |             | 8             | 4    |   |               |

|  |  |   |   |
